Presentation Switcher & Seamless Scaler

The standard in presentation switching, D2 is so much more than seamless switcher.

With multiple output modes, this video processor is a very flexible solution across a range of applications whether for scaling, presentation switching, 4K distribution or broadcast.

Truly an All-in-One solution, D2 accepts a wide range of input signals in a huge array of formats. Inputs can be converted, scaled, transcoded to standard DVI/HDMI outputs or output to optional ports including SDI, HDBaseT and FiberPort.

Intuitive and Easy to Use.

D2 maintains, yet builds on a familiar look and interface. The bright OLED display is easy to read in all light conditions, large illuminated buttons allow easy switching, and for fast setting numbered buttons can be used to digitally enter resolutions and values with high accuracy, avoiding long spins on the adjustment knob.

Advanced Performance.

Not only does D2 have a multiple operation modes, this presentation switcher and scaler packs in a host of professional features including broadcasting Genlock and EDID management. On board processing is 12bit allow fine control for Noise Reduction, Brightness, Contrast, and Saturation. D2 supports modern high resolution standards up to 2560x1600 @ 60Hz. In addition to a wide range of standard output resolutions, D2 supports user customised output resolutions for the ultimate in control.

Picture In Picture

In Standard Mode, PIP can be applied in any size or position.

PIP

DSK/Chroma Key

On PIP, DSK or a Chroma Key can be applied, great for logos and text overlays.

Noise Reduction

Where signals are of low quality and displaying noise / scatter apply the D2 Noise Reduction feature to reduce the impact of the noise on the output signal and improve visual performance.

Rotation and Flip

Output may be rotated, flipped horizontally or vertically.

Operation Modes

Standard Mode

Both the DVI and HDMI output identical signals and resolutions – the HDMI performing as monitor. PIP in can be set in any size or position. X and Y offsets can have negative positions.

Switcher Mode

The DVI performs as Program output while the HDMI operates as Preview output. Resolution settings are identical for both the DVI and HDMI.

Input selection can be made on Preview. Use the dedicated TAKE button to seamlessly switch between Preview and Program.

Dual 2K Mode

The DVI and HDMI perform independently, with each output able to have resolution individually set. Dual 2K mode is ideal for distributing 4K inputs and for outputting to LED displays of differing pitch.

Min Delay Mode

Output resolution is set and locked to the input resolution, with the processor otherwise operating as per Standard Mode. Min Delay operations as the setting suggests, minimises signal delay and is especially useful where SDI output module option is fitted.

Scale

Scale output(s) to any size within the selected resolution range.

Crop & Position

Select X and Y offsets along with width and height to select any image part for output.

Mask

Set output masks for top, bottom, left and right or select from a preset.

Format

D2 accepts most common input formats, and outputs in an even greater array of recognised industry standards up to 2560x1600 @ 60Hz. Additionally D2 allows users to specify any custom output resolution within this range.

Configure EDID

Each compatible input can be individually configured for EDID.

Apps and Remote Control

Windows

Continuing in the RGBlink tradition, D2 includes Windows® software allowing communication by USB or a LAN connection. Along with all settings and operations, updates can be installed via USB connection.

OSX

With many video professionals making use of Apple® Mac laptops, RGBlink uniquely provides a native OSX app allowing full control of settings, operations and updates.

iPhone & iPad

A native universal app for iPad and iPhone is available, providing remote control of settings and making a ideal operations remote where a WiFi connected LAN is available.

Android

RGBlink offers a native Android app for D2. With a wide range of Android devices available, the app is an excellent remote for settings and operations remote of Wi-Fi connected LAN processors.
